Training and Validation Accuracy Graph

Full Python Program

```
import matplotlib.pyplot as plt

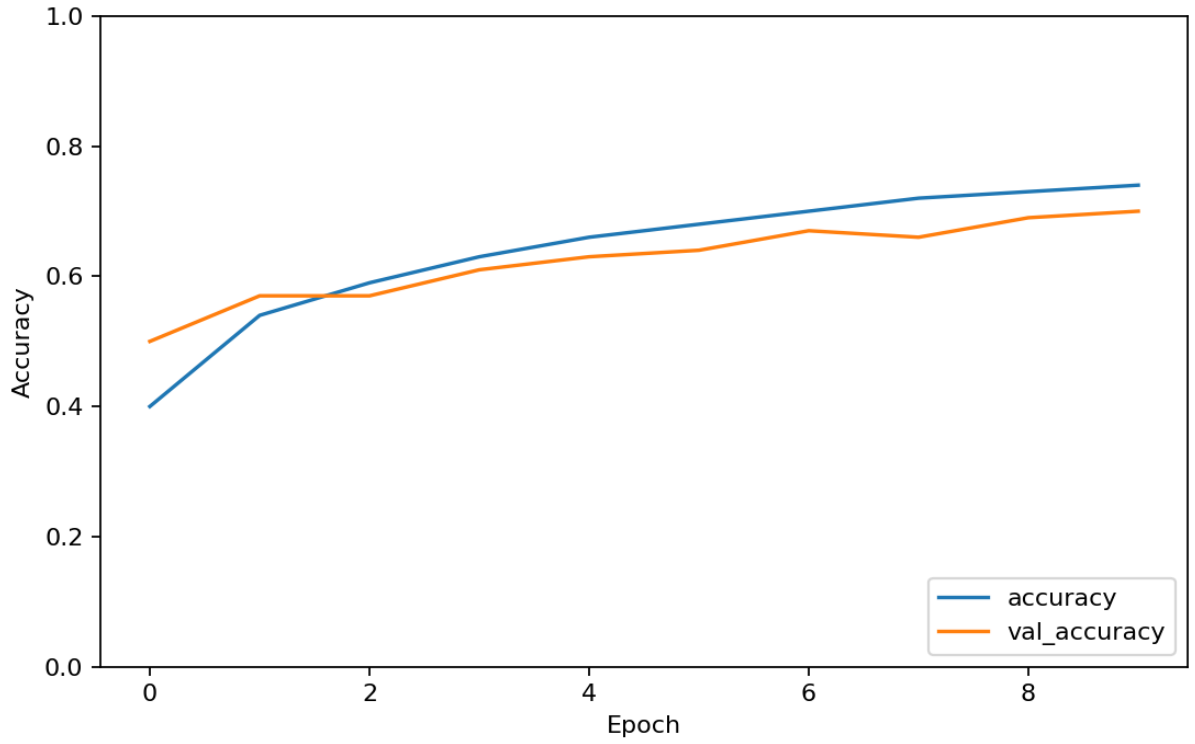

accuracy = [0.40, 0.54, 0.59, 0.63, 0.66,
            0.68, 0.70, 0.72, 0.73, 0.74]

val_accuracy = [0.50, 0.57, 0.57, 0.61, 0.63,
                0.64, 0.67, 0.66, 0.69, 0.70]

plt.plot(accuracy, label='accuracy')
plt.plot(val_accuracy, label='val_accuracy')

plt.xlabel('Epoch')
plt.ylabel('Accuracy')
plt.ylim([0, 1])
plt.legend(loc='lower right')
plt.show()
```

Full Output

Result: The program displays a line graph comparing training accuracy and validation accuracy over 10 epochs.

Note: The accuracy values are entered manually. This program plots a graph; it does not train a CNN model.

If Matplotlib is not installed, run: `pip install matplotlib`
